EDUCATION

B.Tech, Computer Science and Engineering **Jan 2028**
SRM Institute of Science and Technology *CGPA: 9.16*
Relevant Coursework: Data Structures, Operating Systems, Computer Networks, Database Management, Algorithm Design
Computer Science and Engineering coursework built a strong foundation in programming, data structures, operating systems, computer networks, database management, and algorithm design, supporting practical coding and software engineering work.

St. Michael's Academy, Adyar, Chennai (ICSE) — 10th Grade 94% | 2022
BVM Global Perungudi, Chennai (CBSE) — 12th Grade 88.8% | 2024

EXPERIENCE

MEDXAI INNOVATION **May 2026 – Sep 2026**
SDE Intern *Chennai, Tamil Nadu, India*

- Spearheaded coding for a 5-member team delivering a BLE smart ring app that monitored 10 vitals in real time (<2s), applying clean code practices, testing discipline, and code review feedback to keep the release stable.
- Reduced background data loss to <1% by engineering a local-first Room DB sync flow with dual Supabase paths, 3x retry logic, and continuous integration checks for reliable mobile coding.
- Enabled 150+ sport workout tracking by isolating a foreground service from the main app lifecycle, strengthening DevOps-ready coding patterns and improving app responsiveness under load.

SELSONS SOFTWARE SOLUTIONS **Dec 2025 – Jan 2026**
Software Developer Intern *Chennai, Tamil Nadu, India*

- Developed 6+ screens for a React Native heavy vehicle rental app, coding listing, product, booking, and confirmation flows with a clean user journey and maintainable component structure.
- Delivered a real-time chat web app for 30+ internal employees with <500ms latency, using coding best practices, testing, and code review feedback to keep messaging responsive and stable.
- Supported continuous integration and collaborative Git workflows while coding reusable UI modules, improving release confidence across the rental and chat products.
- Contributed to cloud platform deployment and DevOps handoffs by validating builds, fixing integration issues, and documenting implementation details for faster team coding.

KEY PROJECTS

Anbaram – Donation Drive Management System | Flutter, React, Supabase (PostgreSQL), Cloudinary

- Building a digital donation-drive tracking platform for the **Chengalpattu District Administration, Tamil Nadu**, with a single role-based Flutter app (Collection Point and Distribution Center officers) and a React dashboard for the Collector's office, covering the full trail from collection to distribution.
- Designed the Supabase PostgreSQL schema for weight-based, category-wise donation logging (clothes, blankets, stationery, books), including role-based access, an admin-approval flow for officer onboarding, and one-to-one nodal officer mapping per collection point.
- Integrated Cloudinary for photo-backed donation entries and built dashboard views for administrators to track collections, flag issues, and generate reports.
- Presented the solution to the District Collector of Chengalpattu; **currently preparing the Flutter app for Google Play Store release**.

Multi-Agent Dependency Risk Assessor | Python, LangGraph, Groq API, AST Analysis

- Architected a multi-agent LangGraph workflow pipeline that determines whether upgrading an outdated npm dependency will break a codebase, coordinating specialized agents across changelog parsing, AST-based usage analysis, and risk matching.
- Built dedicated agents to parse dependency changelogs for breaking-change signals and statically analyze codebase AST usage, improving coding accuracy when flagging APIs affected by an upgrade.
- Powered agent reasoning with the Groq API (gpt-oss-120b) for low-latency LLM inference, then layered multi-agent outputs into a structured, explainable upgrade-risk verdict with strong coding traceability.
- Designed the pipeline to fit into a dependency-upgrade workflow, replacing manual changelog review with automated coding assistance and agent-driven risk assessment.

SafarX | React Native, Supabase, Expo, React, Anomaly Detection Models

- Built a **hackathon-winning tourist safety app** with geofencing, SOS alerts, and AI-driven anomaly detection using Isolation Forest spatial outlier scoring, placing 3rd at SSN College of Engineering.
- Designed prolonged inactivity and drop-off anomaly detection models using Isolation Forest to identify unusual tourist behavior patterns in real time, strengthening safety-focused coding decisions.

- Created an authority dashboard to monitor alerts, manage geofences, and coordinate emergency response through a streamlined coding interface.

Socket-Talk | React, Express, Socket.IO, MongoDB, TailwindCSS, Cloudinary

- Built a full-stack real-time chat web app with live messaging, persistent chat history, and online-user presence detection via Socket.IO, emphasizing coding reliability and responsive UX.
- Resolved Socket.IO integration issues and stabilized event handling, improving coding quality across the messaging layer.
- Implemented secure JWT authentication with HTTP-only cookies, covering registration, login, and session persistence across devices while keeping the coding flow maintainable.
- Added Cloudinary-backed profile picture uploads and a fully responsive UI with Vite, React, and TailwindCSS, strengthening clean code structure and visual consistency.
- Deployed client and server separately with MongoDB for persistent storage, using coding practices that supported reliable release management.

CORE COMPETENCIES

Languages	Java, Python, C, C++, JavaScript, TypeScript, HTML, CSS, SQL
Frameworks	FastAPI, Express, Node.js, React, Next.js, React Native, Flutter, MongoDB
Others	REST APIs, WebSockets, PostgreSQL, Git, Figma, Postman, Docker, Bootstrap, Neural Networks

ACHIEVEMENTS

SSN College of Engineering (Hackinfinity 2025 Hackathon) - **3rd place**
Acentra Health x HackForge.ai (Build To Care 2026) – **Finalist, Top 5 of 300+ teams**
NIT Trichy (Kanini X Pragyan Hackathon) - **Finalist, Top 10 of 115+ teams**

LANGUAGES

English: Fluent
Tamil: Native, Fluent
